CONTROLLO DEL PERIMETRO AEROPORTUALE

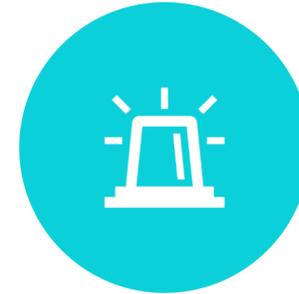

OBBIETTIVI DELLA

POC

Tracciare il movimento di persone e veicoli

Segnalare l'ingresso in aree di **allarme**

Convertire le informazioni visive in informazioni strutturate per **analisi off-line**

Stimare **accuratezza e robustezza** al variare delle condizioni ambientali

Comprendere le **potenzialità** della tecnologia e gli spazi di **ottimizzazione**

REQUISITI

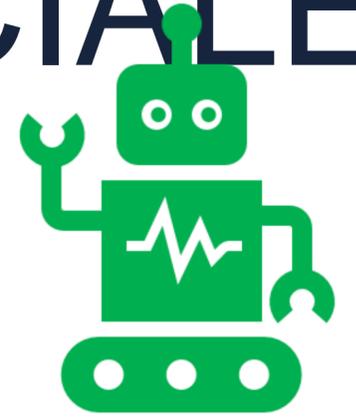

Allarmi in tempo reale per intrusioni/fughe

Scalabile fino a 1000 telecamere

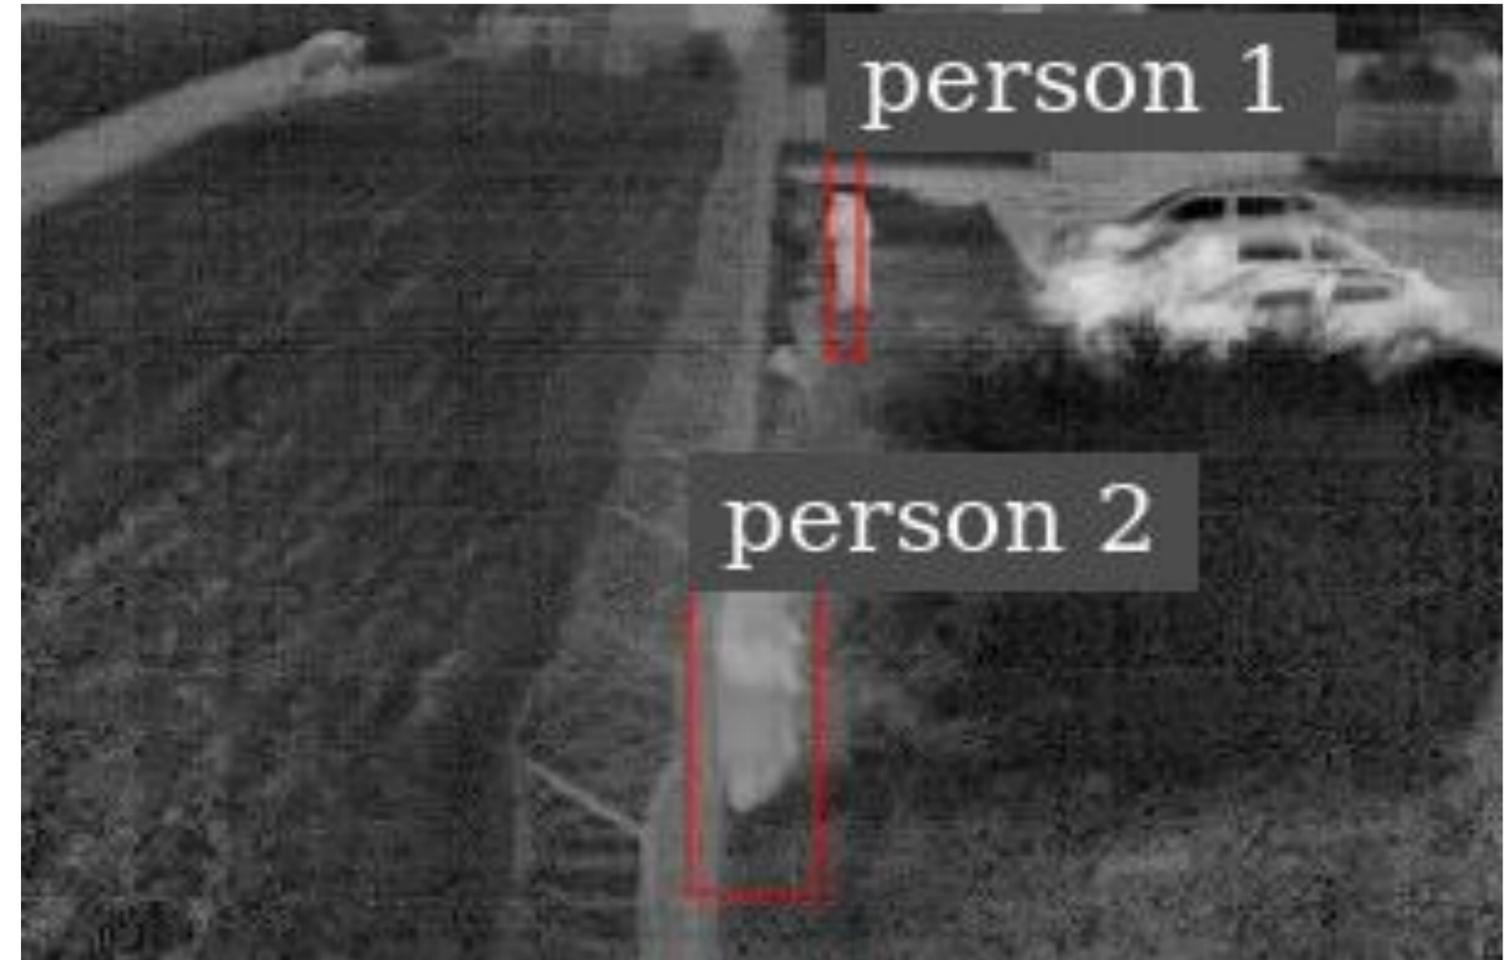

Potenziale di applicabilità per vari scopi/contesti

Interfacciabile con il sistema di VMS aeroportuale

SISTEMI DI VISIONE ARTIFICIALE

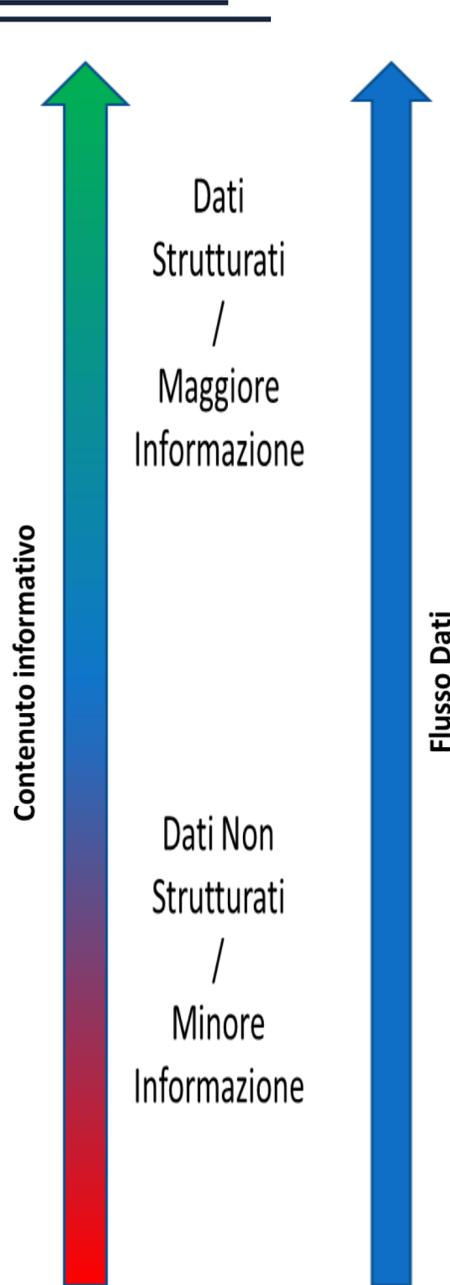

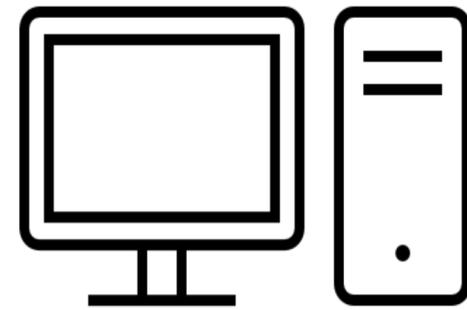

Controllo con telecamere con ottica normale e termica

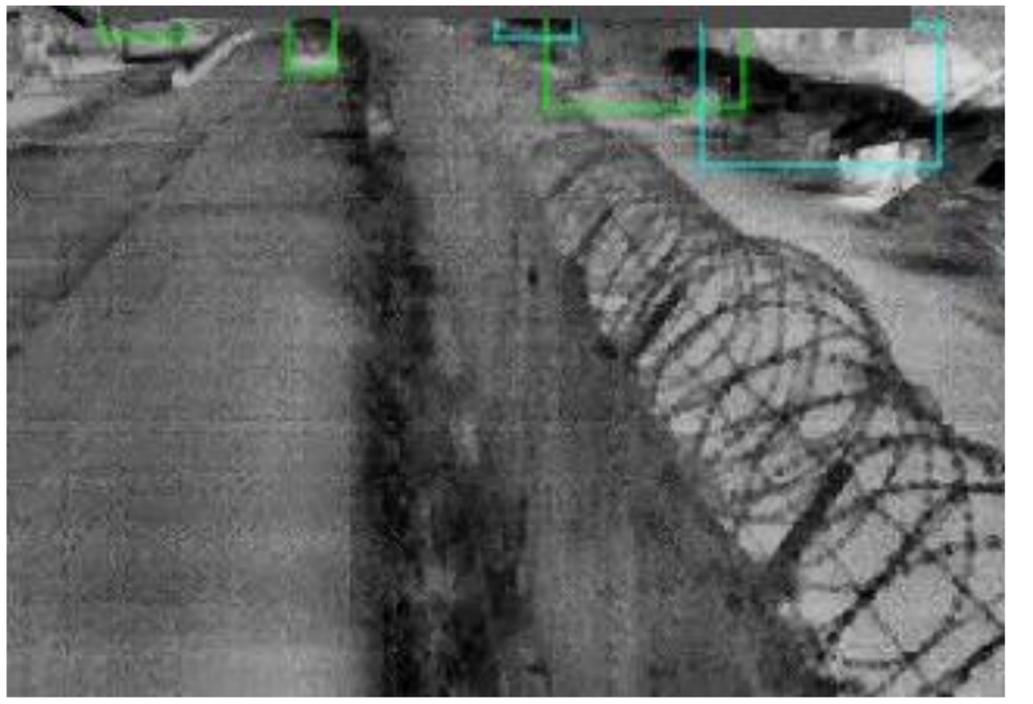

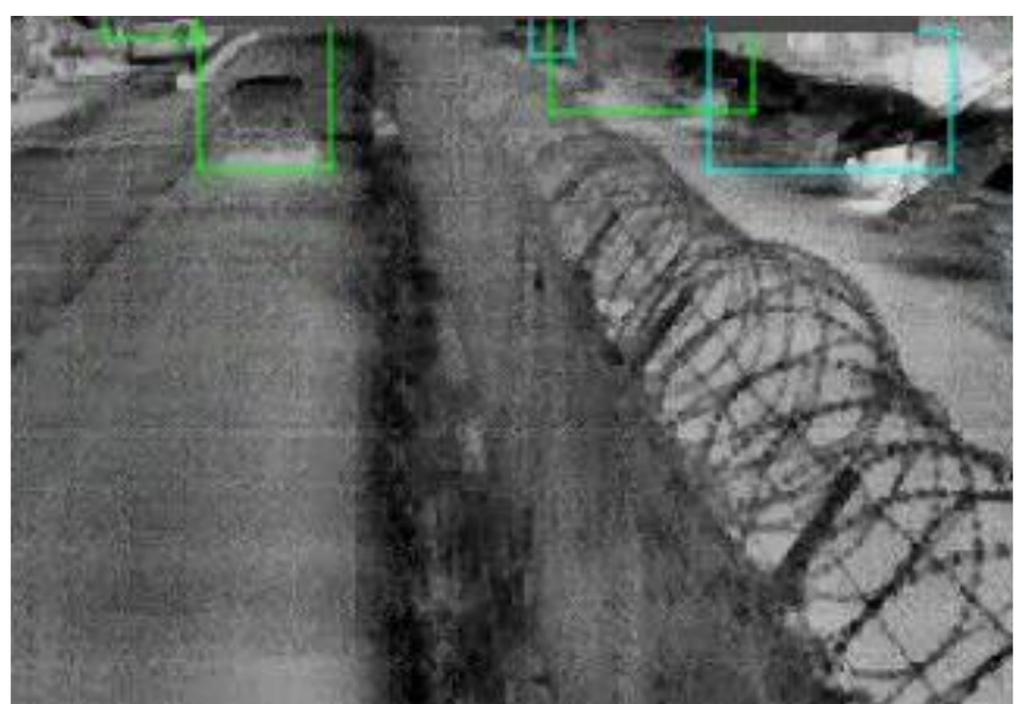

Identificazione e tracciamento con
Intelligenza Artificiale

BGY WELCOME TO MILAN BERGAMO AIRPORT 17:25

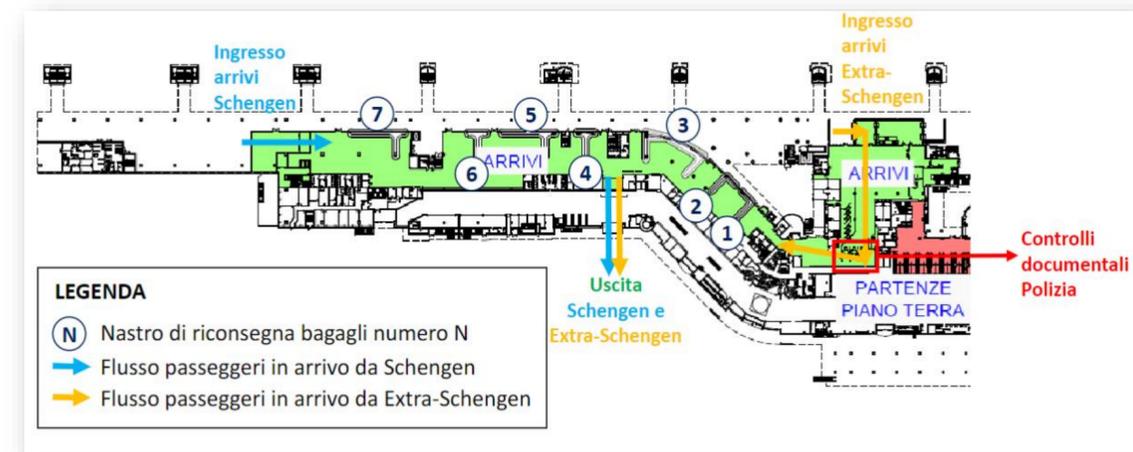

Splunk & ML

Goal

Automatic baggage reclaim belt allocation solution to relieve operators of manual operation

The system provides:

- Uniform usage of belts
- Minimum distance traveled by passengers for baggage pick up
- Ad-hoc logics according to flight type
e.g. flight splitting on contiguous belts

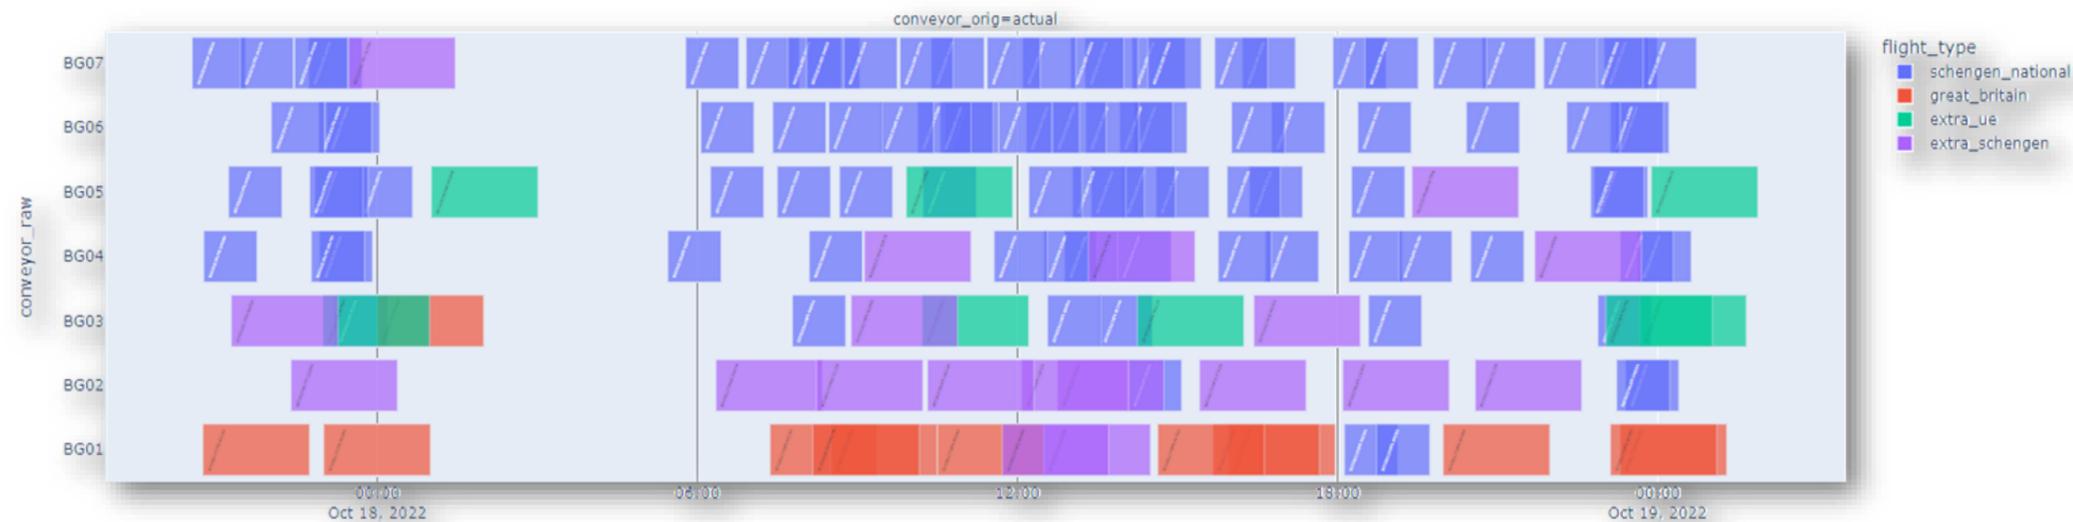

Features

Real time

Web-based dynamic Gantt + Splunk

Allocations simulator

Baggage loading per belt

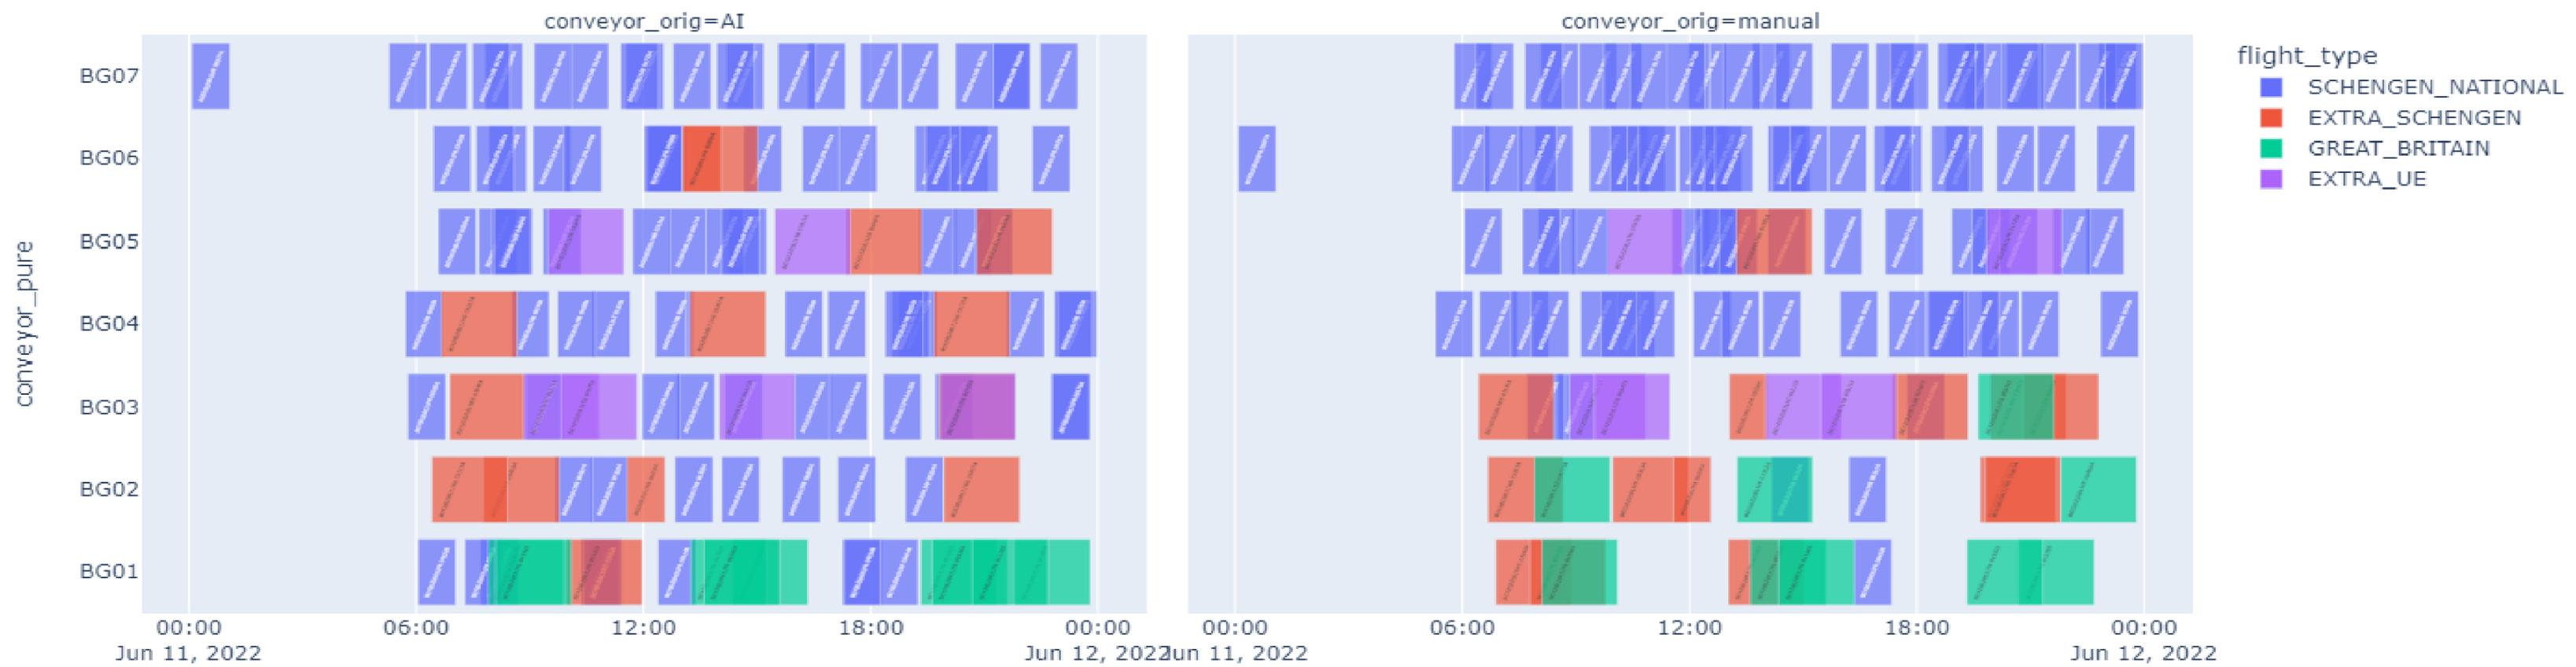

manual

GANTT distribuzione voli

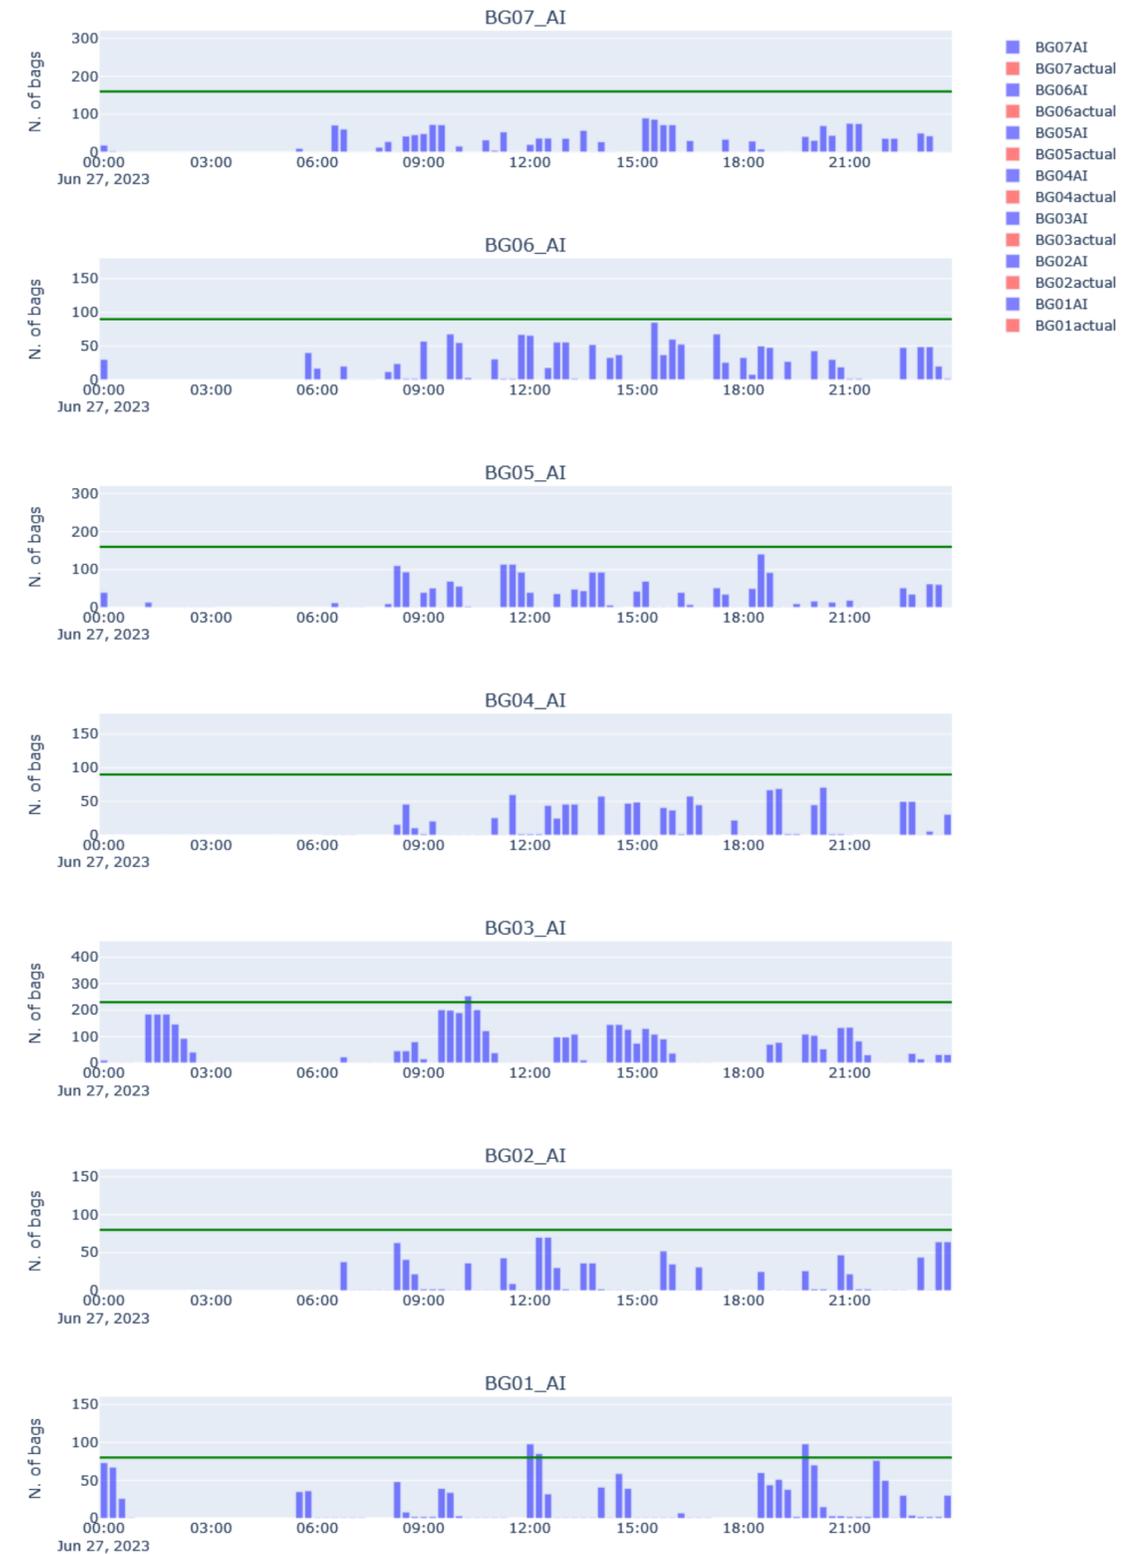

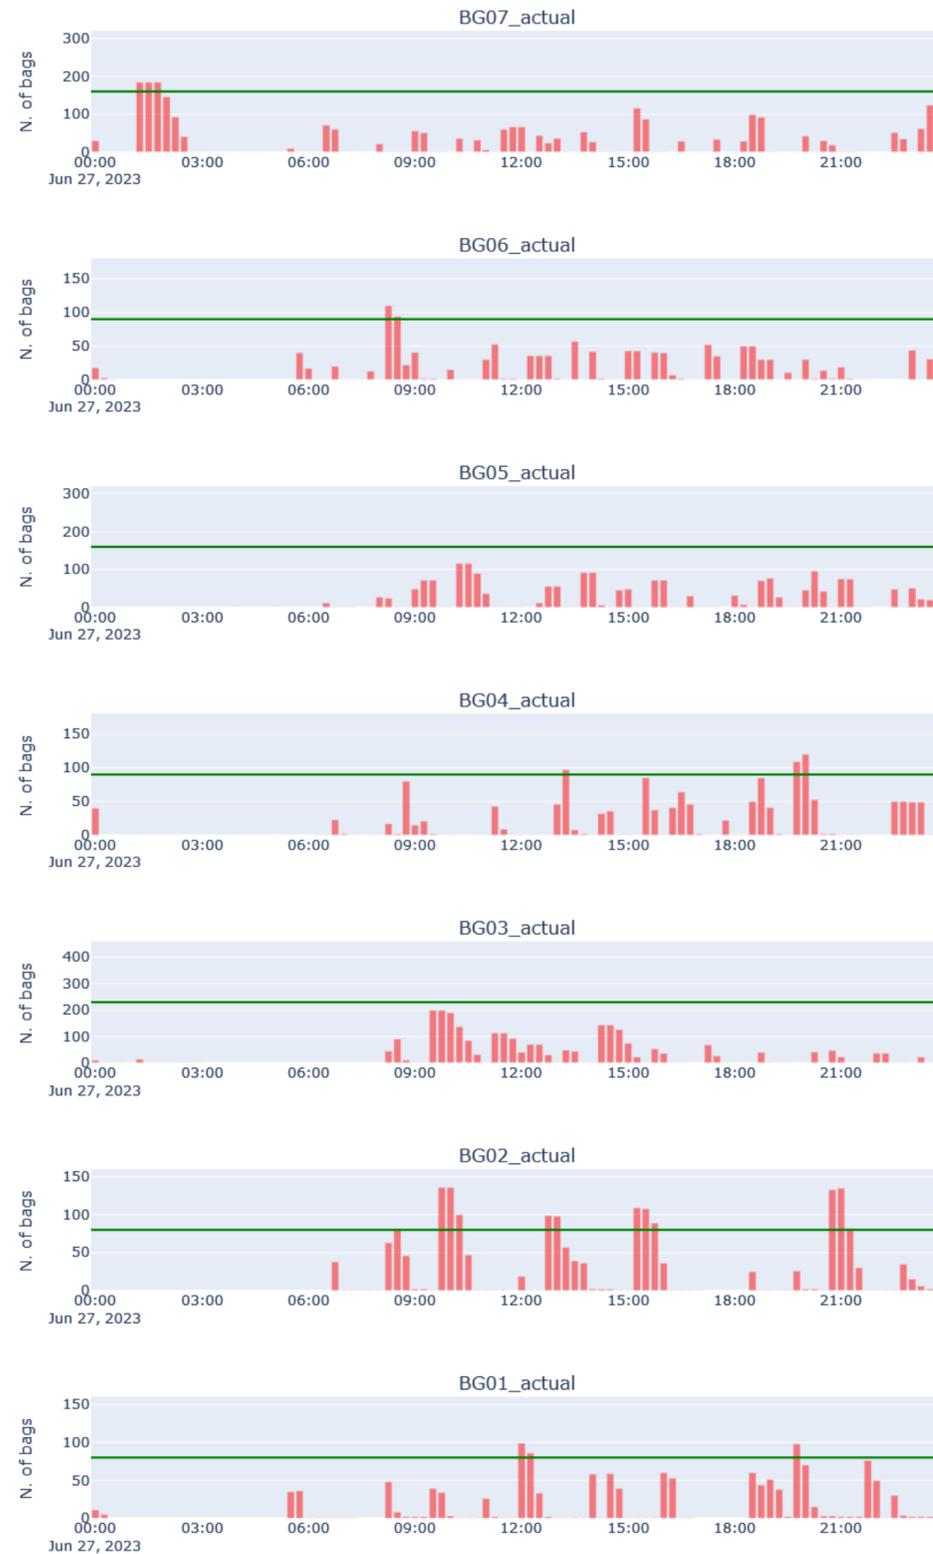

Allocazione automatica

Allocazione manuale

VOLUME BAGAGLI

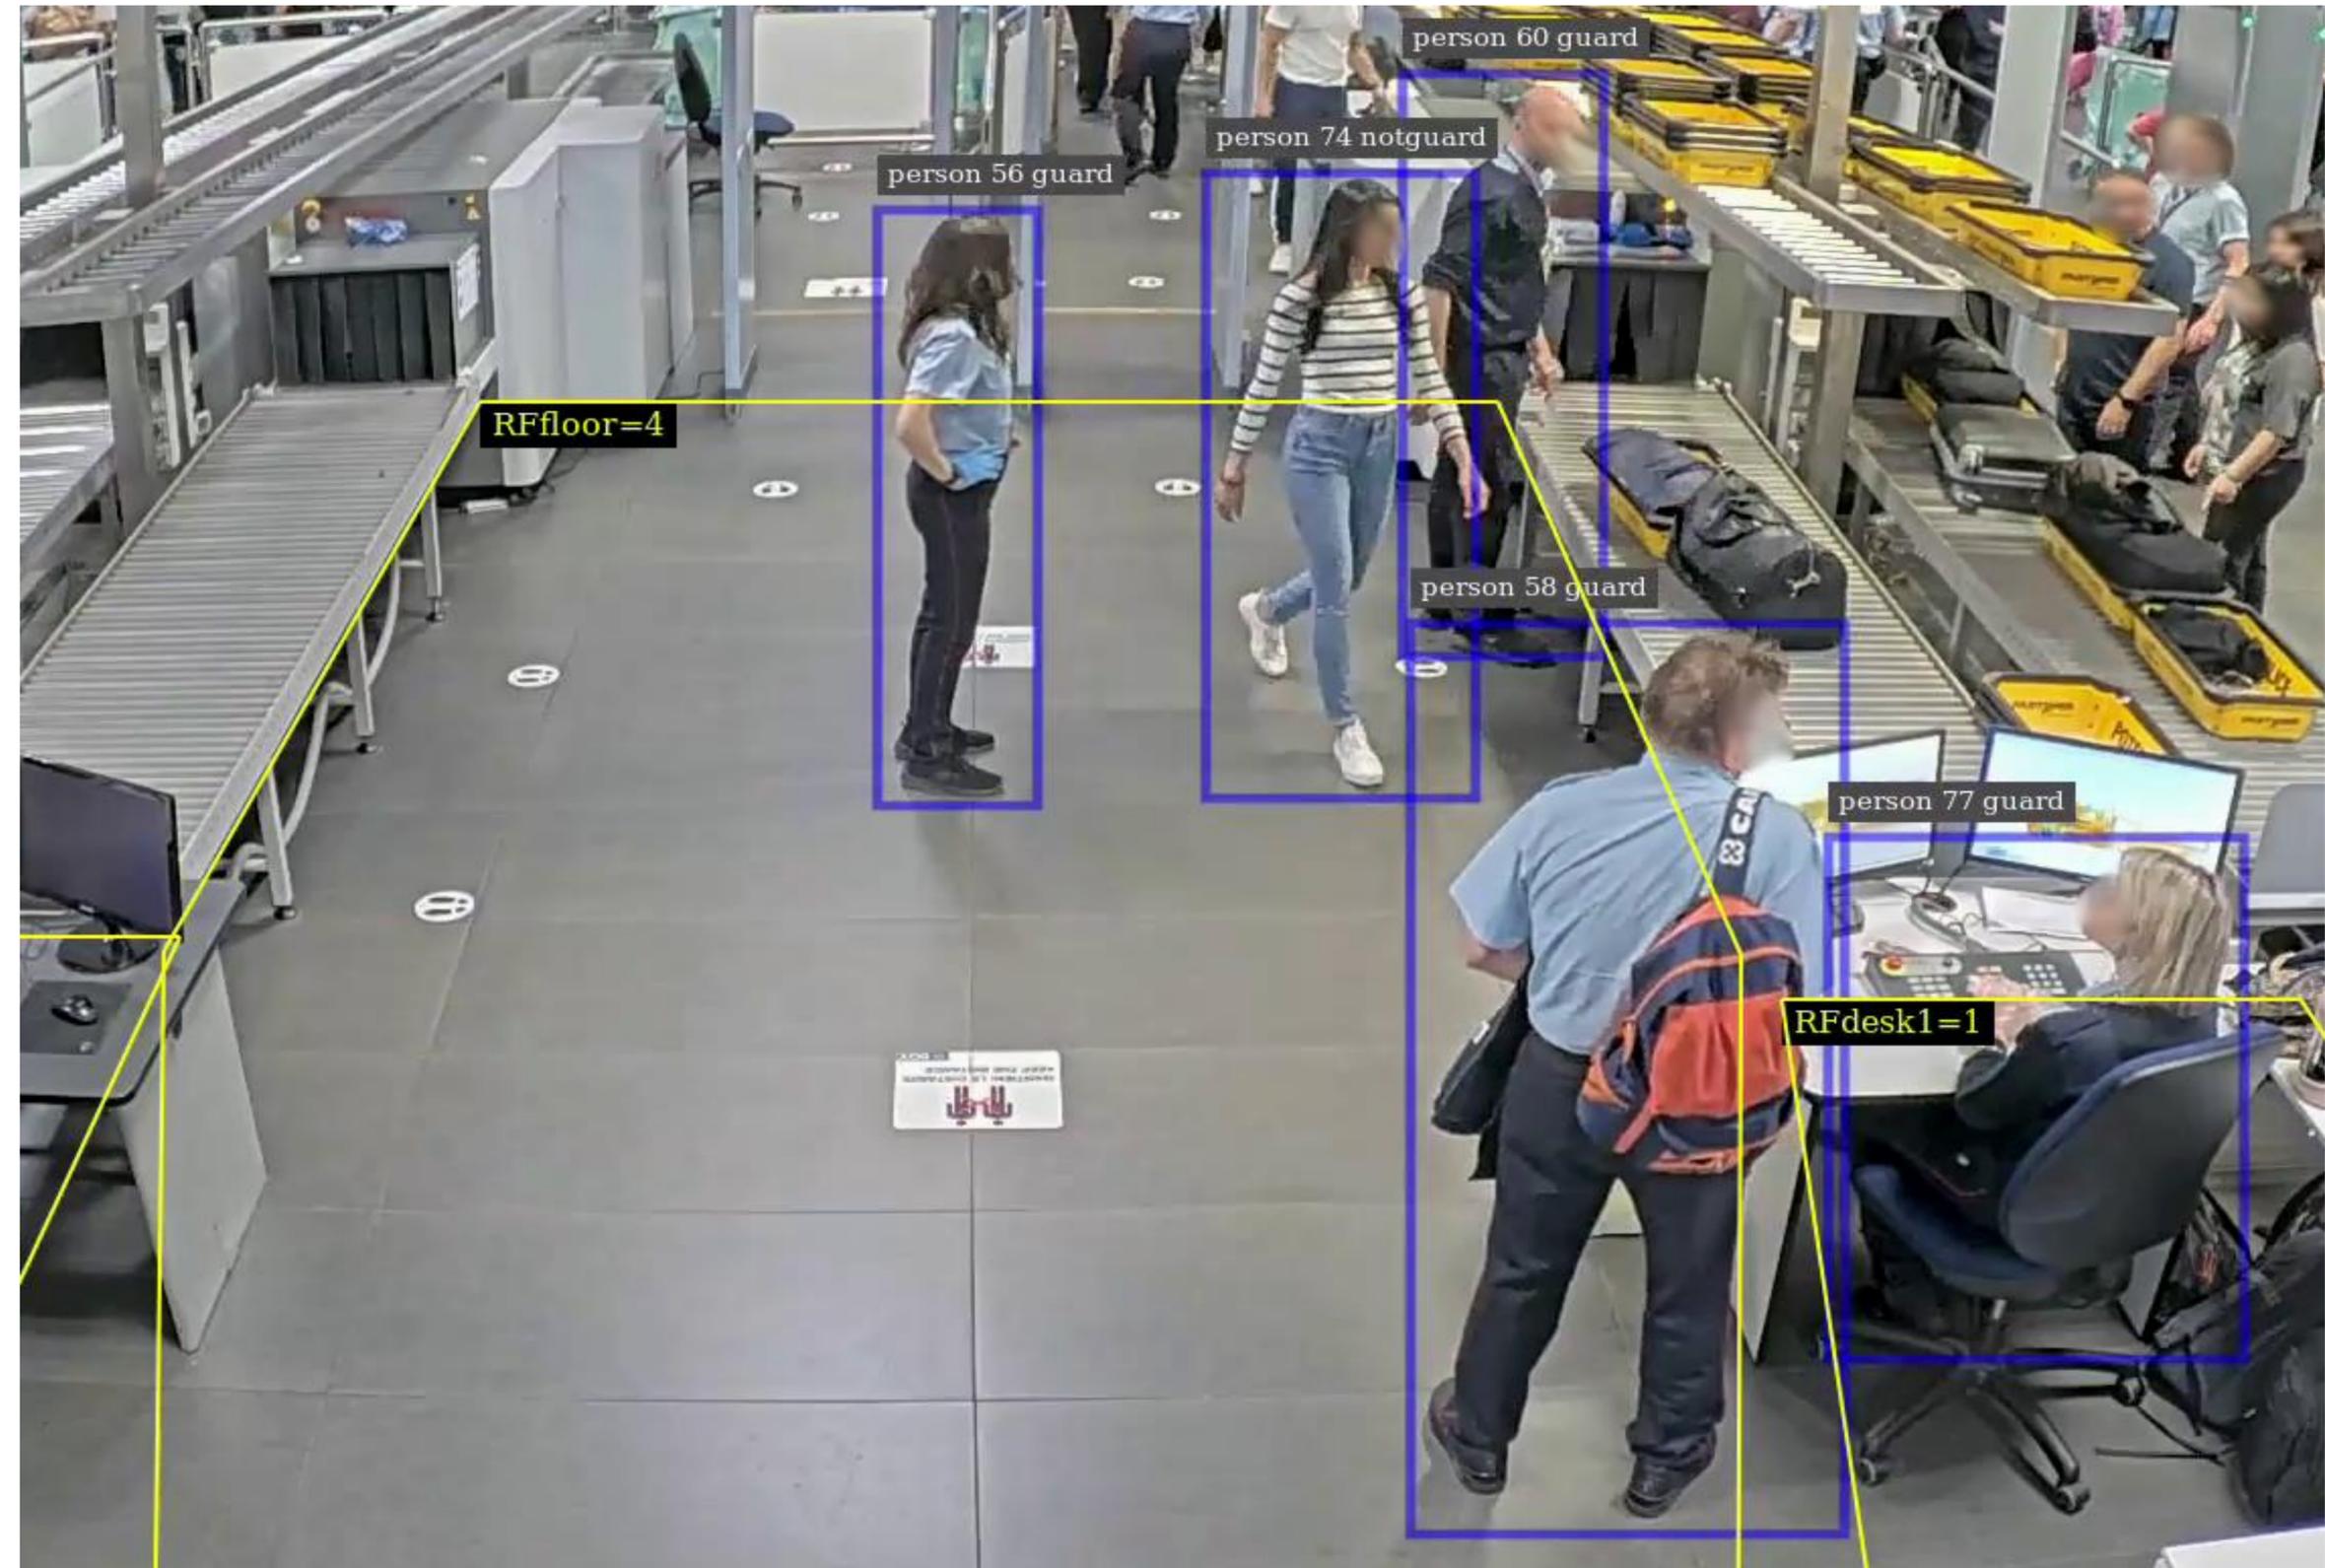

- Confronto distribuzione bagagli tra allocazione manuale (rosso) e automatica (blu)
- L'allocazione automatica non eccede mai, oltre una soglia di pochi punti percentuali, le allocazioni massime per nastro

ARCHETTI

- Passeggeri e guardie di sicurezza, in modo del tutto anonimo, entro certe zone vengono discriminati per garantire il livello di servizio necessario per la sicurezza

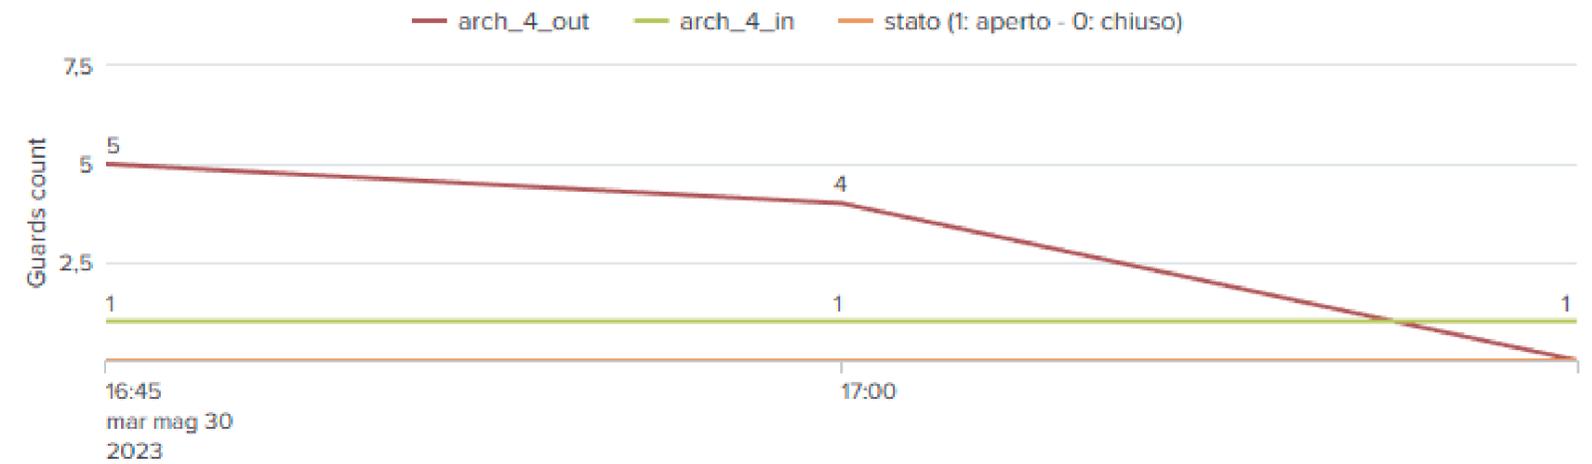

Archetti - Dashboard

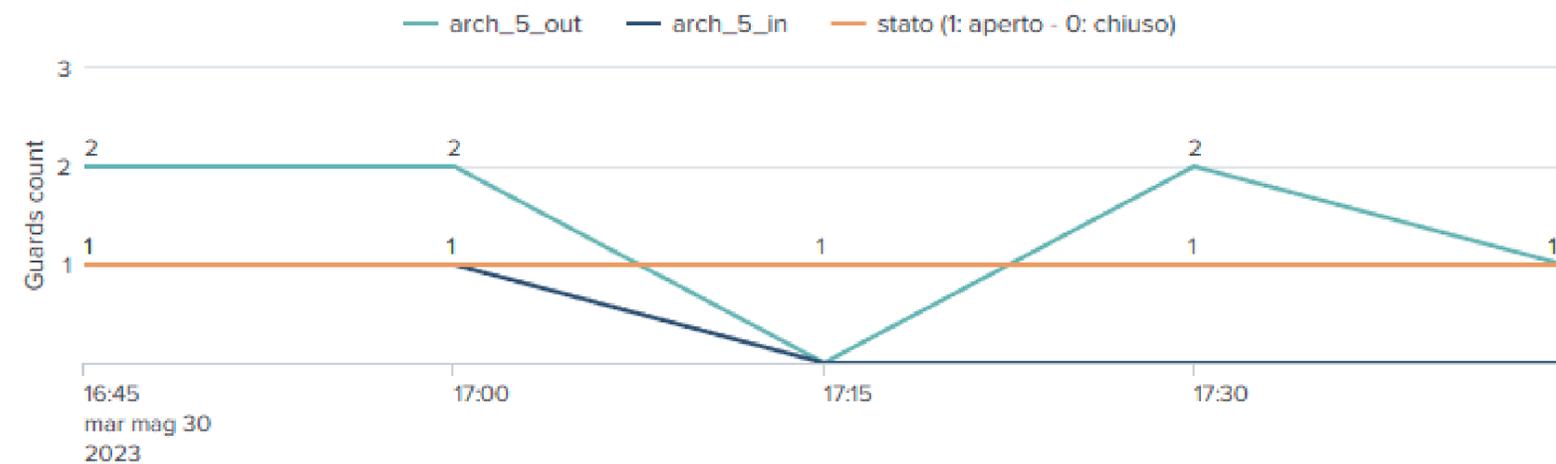

ARCHETTO 3 (IN - CAMERA 195 , OUT - CAMERA 112)

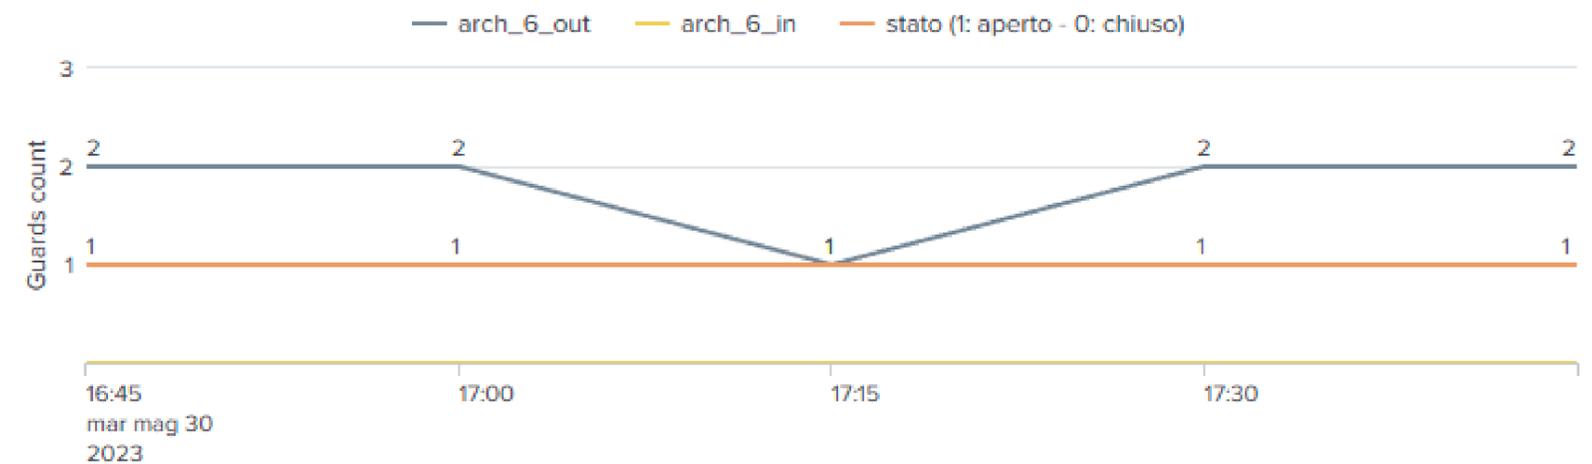

ARCHETTO 4 (IN - CAMERA 195 , OUT - CAMERA 112)

ARCHETTO 5 (IN - CAMERA 194 , OUT - CAMERA 113)

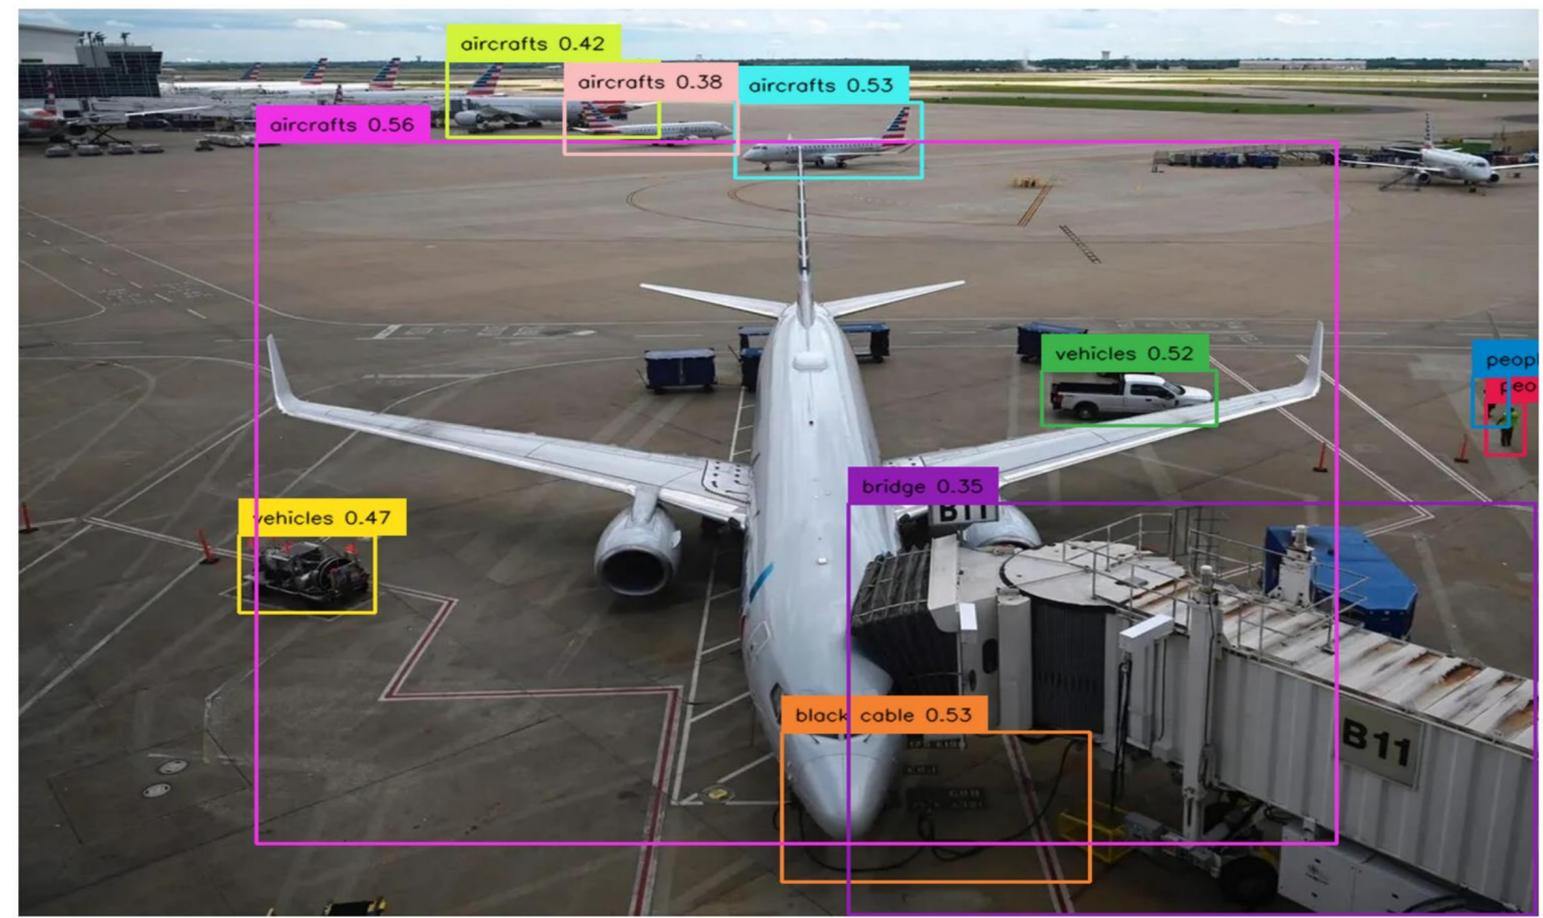

ARCHETTO 6 (IN - CAMERA 194 , OUT - CAMERA 113)

AVIO – Nuove tecniche di AI

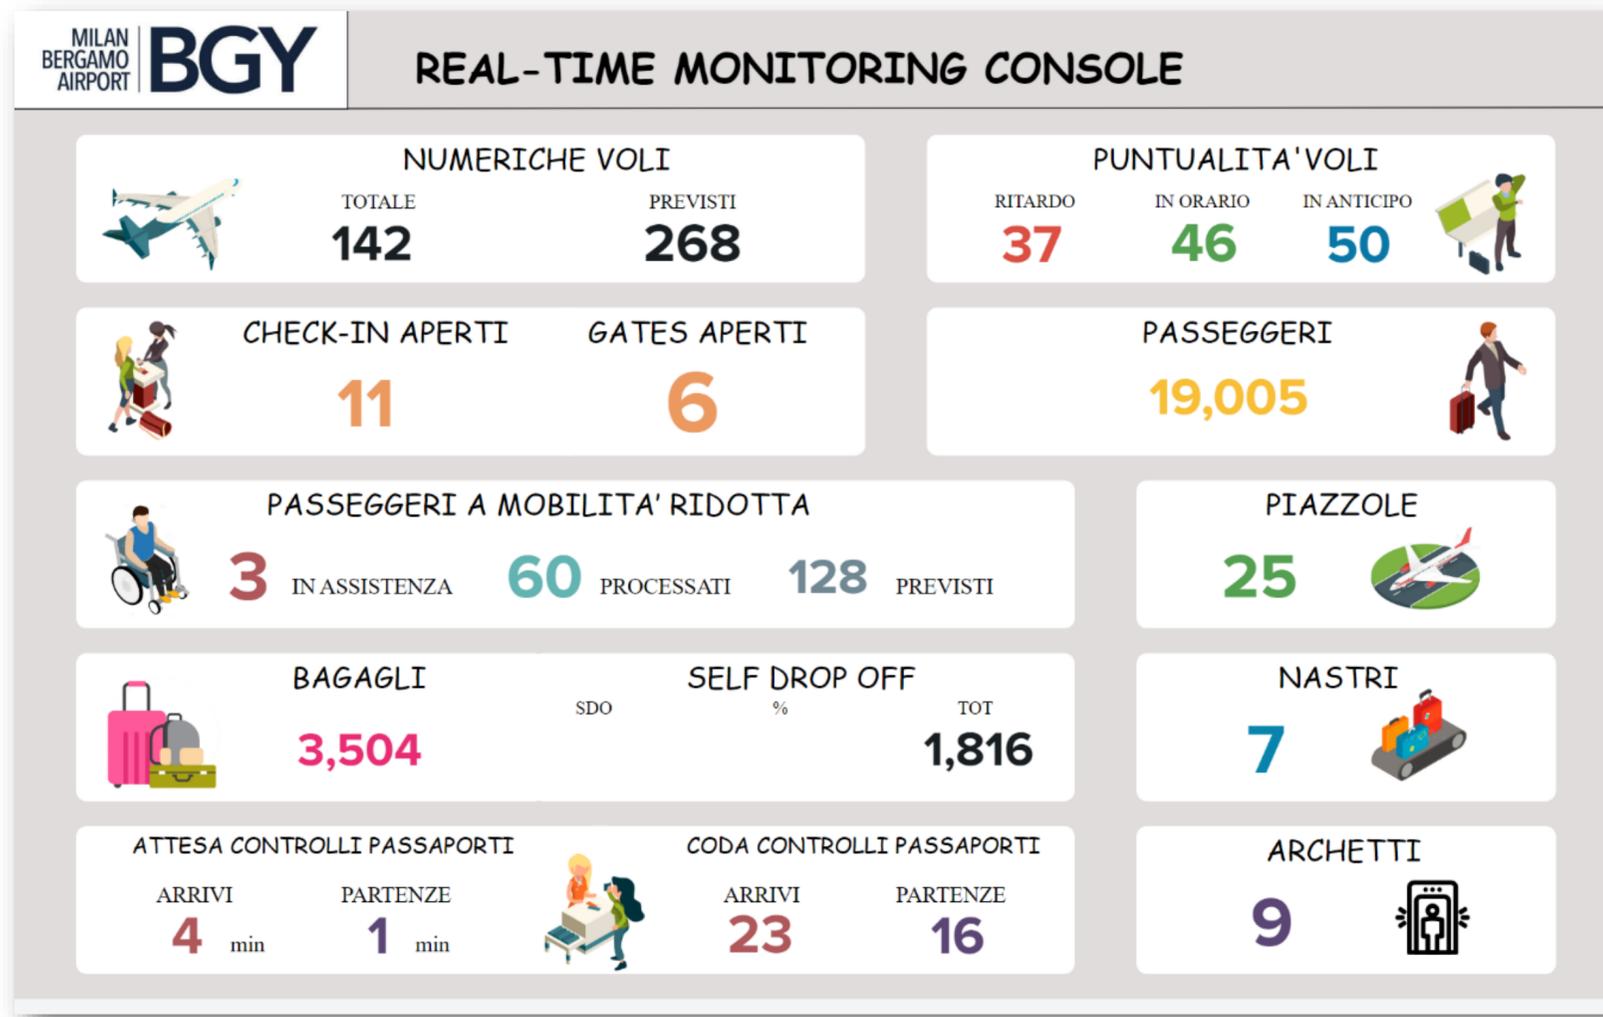

- Modelli generativi per la simulazione di condizioni meteo
- Foundation model per l'annotazione automatica

Glass Table Splunk

The Splunk dashboard is designed to meet various use cases:

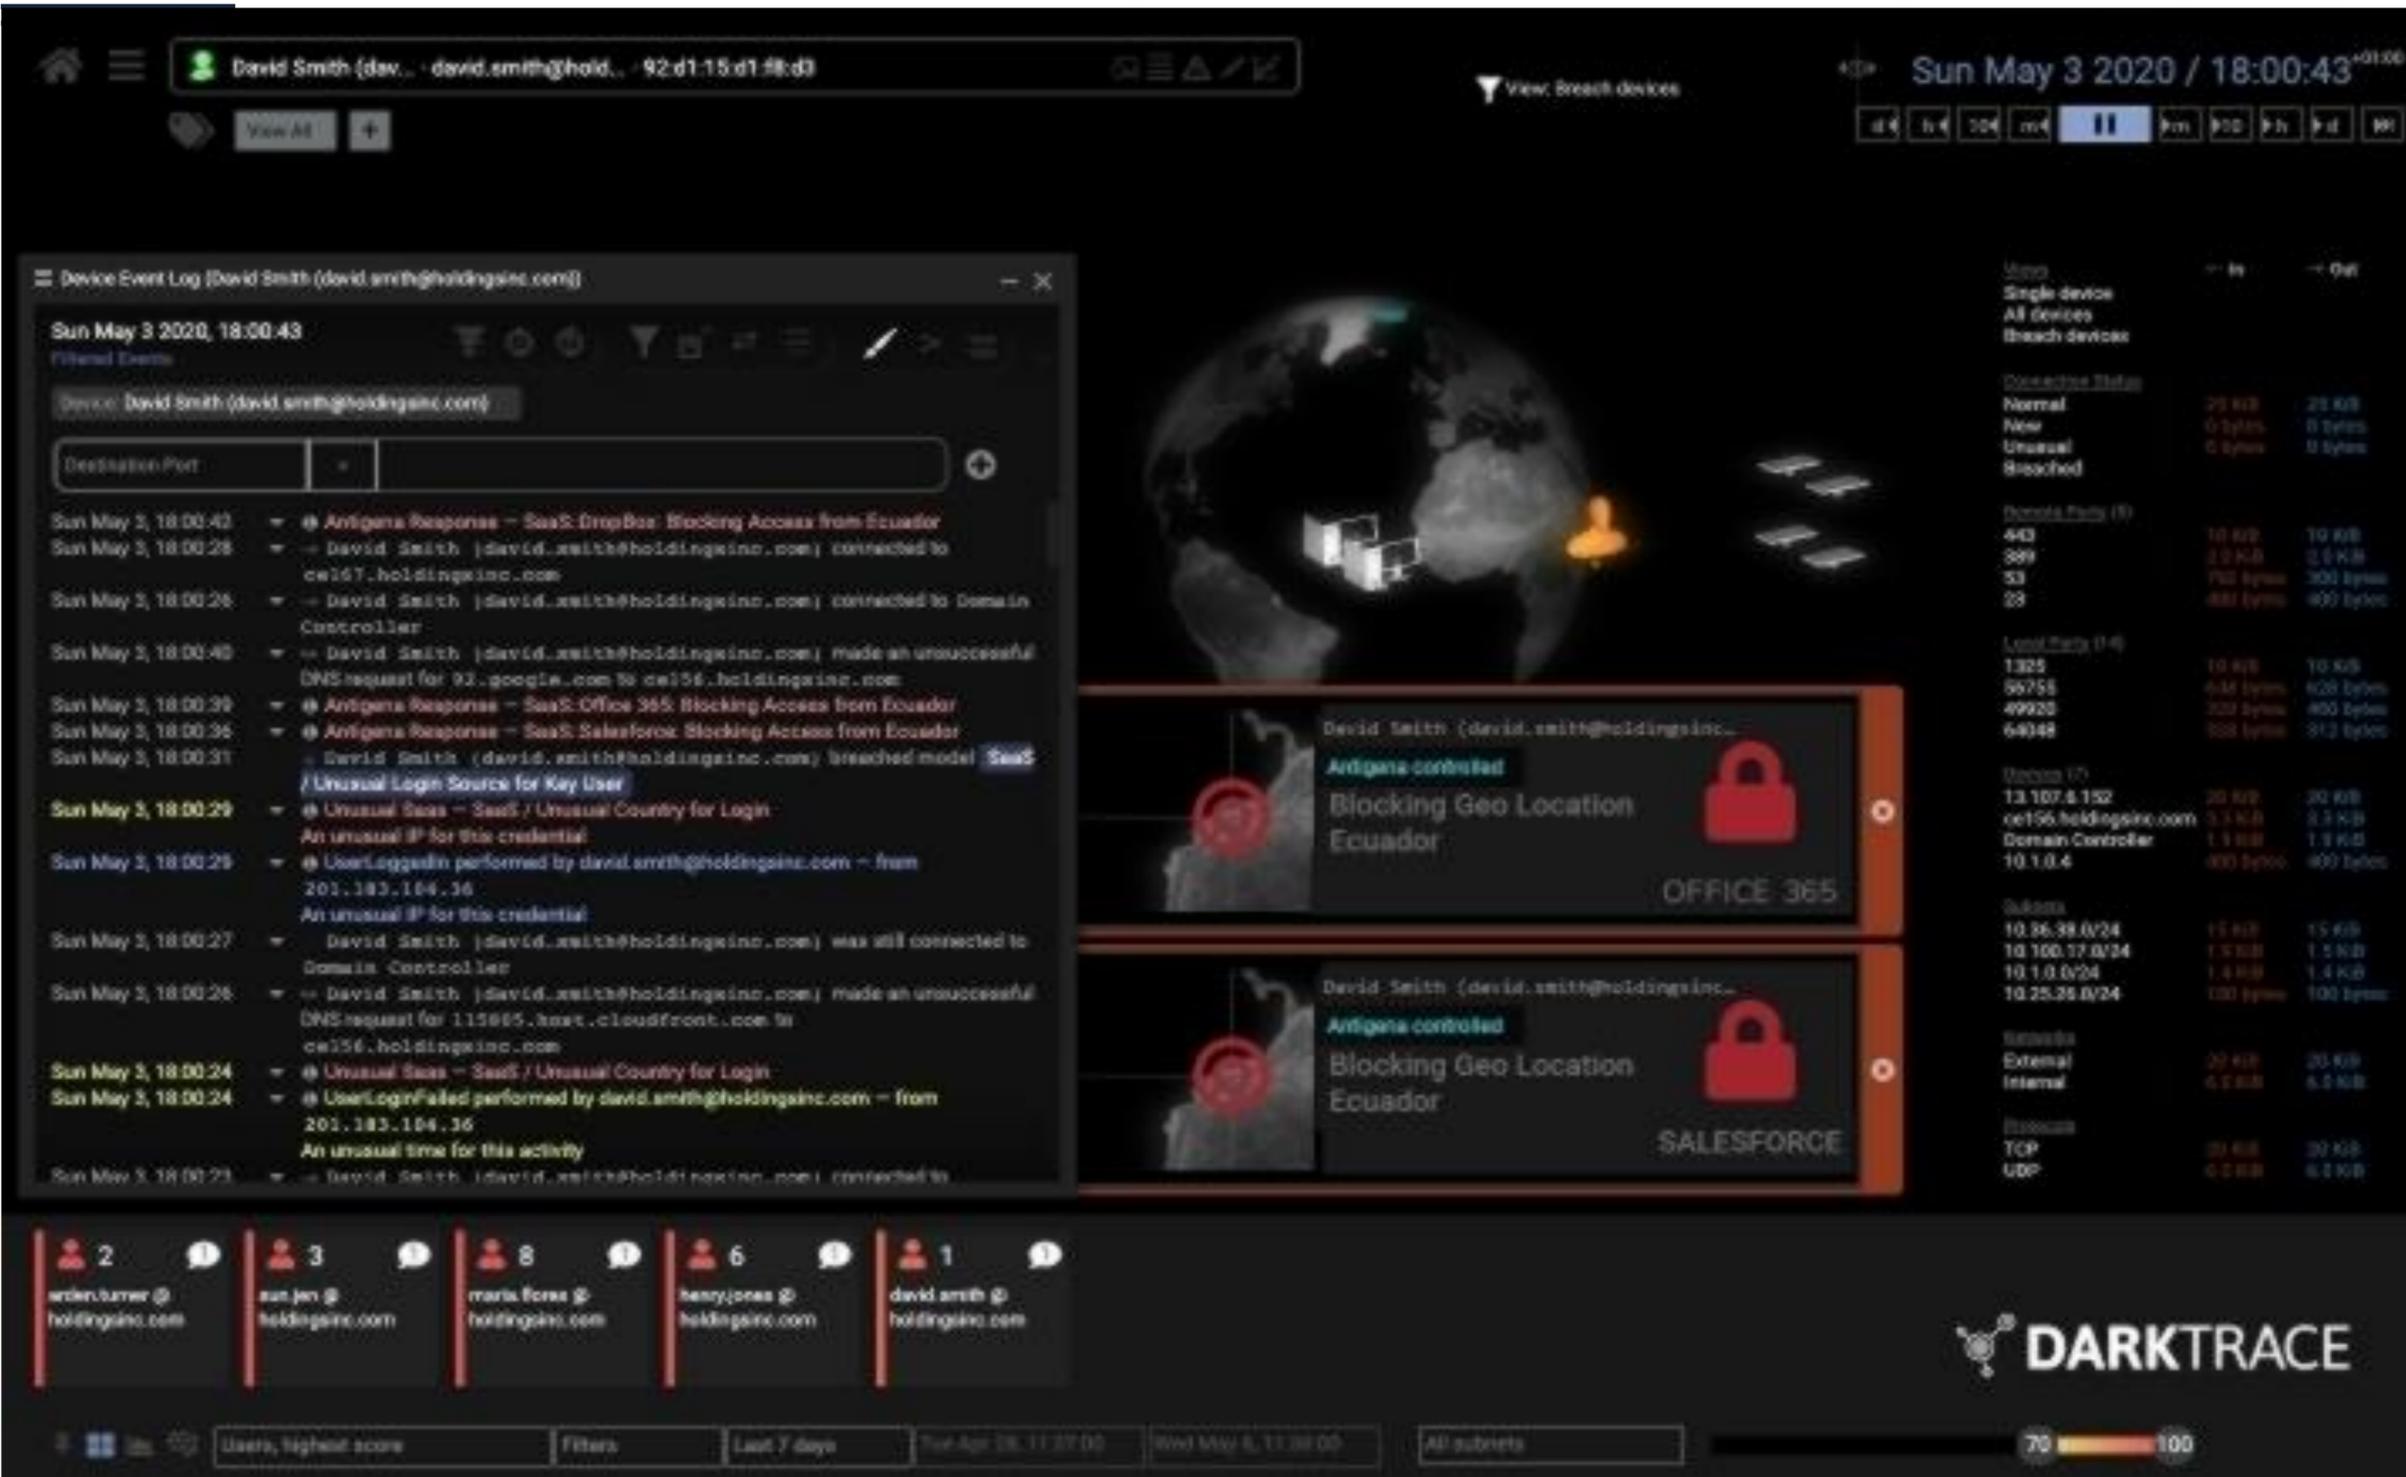

- A drill down tool for airport operators to control individual processes
- A monitor of KPIs shown on screens wall in the IT Control room and in the CEO office

CYBER SECURITY

Risposta strategica
Con la risposta strategica, Antigena Network agisce come il “cervello AI” dell’intero sistema di sicurezza, sfruttando le rilevazioni estremamente affidabili per trasferire e integrare le difese in linea come meccanismo di risposta.

Tramite integrazioni attive, Antigena Network è in grado di collegarsi con facilità e migliorare l’ecosistema difensivo esistente, informando firewall e dispositivi di rete sugli attacchi che hanno

CYBER SECURITY

The screenshot displays the Darktrace security interface. At the top, a user profile for Henry Jones is visible. The main area is divided into several sections:

- Device Event Log:** A list of events for device Henry Jones (henry.jones@holdinginc.com) on Sat May 2, 2020, at 23:31:12. Key events include:
 - Antigena Response - Connection Blocked: Henry Jones failed to connect to www.securepoint.de.
 - Antigena Response - Connection Blocked: Henry Jones failed to connect to www.vetransafar.com.
 - Antigena Response - Block external communication over port 443 for 5 minutes.
 - Firewall Blocked - Firewall Blocked Outgoing connection www.nosp.com.
 - New Credential Usage - Credential Created: test-admin@holdinginc.com.
 - File Downloaded performed by henry.jones@holdinginc.com on File Cloud kdbx.
 - File Downloaded performed by henry.jones@holdinginc.com on File Backup_Schedule.xlsx.
- Network Traffic Analysis:** A world map shows a connection path from Europe to a red location in North America. A table on the right provides traffic statistics:

Time	In	Out
Connected Status

- Darktrace Logo:** Located at the bottom right of the dashboard.

Risposta tattica
Con la risposta tattica, Antigena Network genera azioni auto-gestite che neutralizzano gli attacchi in pochi secondi.
Ogni risposta viene eseguita con precisione chirurgica e si basa sulla comprensione granulare che il sistema ha su ciò che è “normale” per l’intera organizzazione. Ciò consente ad Antigena Network di giudicare in modo affidabile quali eventi necessitano della Autonomous Response e di salvaguardare la normale attività lavorativa, facendo rispettare il normale “pattern of life” di un dispositivo infetto o di un utente compromesso.

GRAZIE PER L'ATTENZIONE
